

Description

Pollinators are under increasing pressure as habitat diminishes. Green roofs can help extend some relief, if designed properly. Our Biodiverse Pollinator-Friendly Blend offers the perfect variety of herbaceous perennial accent plants to attract pollinators to the succulent based green roof. Hand-picked by our experienced staff, these species provide pollen, nectar, and larval sources for local pollinators. These plants have strong, long season faunal associations, and are tried and true accents, on extensive green roofs. Our goal with these mixed flats is to offer a product that can be specified not only on new green roofs, but, also added to existing green roofs, to increase pollinator activity in both planned and existing green spaces.
