Description

Designed specifically for green roofs that get only either morning or afternoon sun. This Biodiversity Blend pairs well with our Semi-Shade Mixed Flat by adding additional color and texture to shadier spaces. The accent plants can be planted randomly through the base layer that is created by our Semi-Shade Mixed Flat. For more impact they can be planted in groups or in specific microclimates. As with most non-succulent herbaceous perennials, the plants in this mix prefer a little extra media depth, 6” to 8”, and a little extra moisture
