

## Description

Fast-growing, with good year-round interest. Lime-green leaves turn to bright yellow in summer, taking on coral tones of orange and red in cold months. Requires excellent drainage, and prefers full sun but can tolerate bright shade. Planted for foliage, it does not flower reliably. Best used as an accent on a roof, as coverage is less-dense as other ground covers, and may die back in unusually wet seasons. On edges of roofs and in planters it has a nice cascading effect. Excellent for adding unique color to any planting.

## Profile

- **Botanical Name:** Sedum rupestre 'Angelina'
- **Family:** Crassulaceae
- **Plant Type:** Hardy Succulent
- **Plant Usage:** Accent
- **Hardiness Zone:** 4
- **Foliage Color:** Chartreuse / Golden Yellow
- **Flower Color:** Yellow
- **Bloom Time:** Early to Mid-Summer
- **Winter Interest:** Coral to Orange Foliage
- **Height:** 5"
- **Spread:** 8"
- **Light Requirement:** Full Sun to Partial Shade
- **Origin:** Central and Western Europe
- **Self Sowing:** No
- **Shade Tolerant:** Partial
- **Substitutes:** [Sedum sichotense](#), [Sedum sexangulare](#),
