

Description

This interesting accent plant goes by the common name of moon carrot. It is a pollinator magnet and, though not a native itself, is a host for the larvae of the eastern swallowtail butterfly. It has flat-topped clusters of white flowers.

This plant needs to be grown in a deeper media profile than most plants we provide, preferably a minimum of 6-8".

Profile

- **Botanical Name:** Seseli gummiferum
- **Family:** Apiaceae
- **Plant Type:** Hardy Perennial
- **Plant Usage:** Accent
- **Hardiness Zone:** 5-9
- **Foliage Color:** Green
- **Flower Color:** White
- **Bloom Time:** Late Summer
- **Winter Interest:** Dormant
- **Height:** 24"
- **Spread:** 24"
- **Light Requirement:** Full Sun
- **Origin:** Crimea, South Aegean
- **Self Sowing:** Somewhat
- **Shade Tolerant:** No
- **Substitutes:**
