

Description

This interesting accent plant goes by the common name of moon carrot. It is a pollinator magnet and, though not a native itself, is a host for the larvae of the eastern swallowtail butterfly. It has flat-topped clusters of white flowers.

This plant needs to be grown in a deeper media profile than most plants we provide, preferably a minimum of 6-8".

Profile

- Botanical Name: Seseli gummiferum
- Family: Apiaceae
- Plant Type: Hardy Perennial
- Plant Usage: Accent
- Hardiness Zone: 5-9
- Foliage Color: Green
- Flower Color: White
- Bloom Time: Late Summer
- Winter Interest: Dormant
- **Height:** 24"
- **Spread:** 24"
- Light Requirement: Full Sun
- Origin: Crimea, South Aegean
- Self Sowing: Somewhat
- Shade Tolerant: No
- Substitutes:
