Sedum selskianum

Sedum selskianum is one of the most often mislabeled sedums, in the trade. Leaves are similar in appearance to many other kamtschaticum-like species in their early stages of growth. The distinguishing feature is soft hairs on all parts of this plant. This species puts out new growth throughout the spring, forming mounds of foliage in late summer. Yellow flowers appear in mid-summer. Red stems stand out nicely against the lighter green foliage. Leaves turn pinkish in cold weather, and drop relatively early in the season. Tiny basal rosettes are set for the winter months, however, these are not large enough to be noticeable under the previous year's growth. An excellent accent plant for green roofs and walls.

CHARACTERISTICS

Foliage Color: Green, bright red stems

Flower Color: Yellow

Bloom Time: Mid-Summer

Winter Interest: None (Deciduous)

BOTANICAL INFORMATION

Place of Origin: Northern China, South Mongolia,
Russia, Kazsakhstan

Hardiness Zone: 4

Height: 10" Spread: 8"+

Self-sowing: No

Light Requirement: Full sun

Plant Use: Accent

PLANT SIZE

Deep nursery plug
3" deep x 1.5" across at the top

PLANT SPACING

6 Plugs per sq. ft. – 3 Month coverage
4-5 Plugs per sq. ft. - 6-12 Month coverage
2-3 Plugs per sq. ft. – 12-18 Months coverage
